## Dr. Sam Parnia's groundbreaking research is changing our understanding of what happens when we die

Dr. Sam Parnia is a British-Iranian physician and researcher who has dedicated his career to studying near death experiences (NDEs) and mystical experiences. His work has revolutionized our understanding of what happens when we die and has provided evidence that consciousness may continue after the body has died.

Parnia's research has focused on the following areas:

- The biology of NDEs: Parnia has conducted a number of studies that have identified the biological changes that occur in the brain during an

NDE. These studies have shown that NDEs are not simply hallucinations or the product of a dying brain, but rather are real experiences that have a profound impact on the experiencer.

- The relationship between NDEs and mystical experiences: Parnia's research has also shown that NDEs are often accompanied by mystical experiences, such as seeing bright lights, hearing beautiful music, and meeting deceased loved ones. These experiences are often life-changing for the experiencer and can lead to a deeper understanding of the meaning of life and death.
- The implications of NDEs for our understanding of death: Parnia's research has implications for our understanding of death and the afterlife. His work suggests that death is not the end of consciousness, but rather a transition to another state of being. This research provides hope and comfort to those who are facing death and their loved ones.

Parnia's research is groundbreaking and has changed our understanding of what happens when we die. His work provides evidence that consciousness continues after the body has died and that death is not the end of our existence. This research is important for everyone who is interested in the nature of death and the afterlife.

### **Parnia's Book: What Happens When We Die?**

Parnia's research is summarized in his book, *What Happens When We Die?* In this book, Parnia presents the latest scientific evidence on NDEs and mystical experiences. He also discusses the implications of this research for our understanding of death and the afterlife.

*What Happens When We Die?* is a must-read for anyone who is interested in the nature of death and the afterlife. Parnia's research is groundbreaking and provides hope and comfort to those who are facing death and their loved ones.
