A Comprehensive Guide to the Surgical Management of VPI in Children

Velopharyngeal insufficiency (VPI) is a condition that occurs when the velopharyngeal valve does not close properly, allowing air to escape through the nose during speech. This can lead to a variety of speech problems, including hypernasality, nasal emission, and articulation errors.

Surgery is the most common treatment for VPI. The goal of surgery is to create a more competent velopharyngeal valve that will allow for normal speech production. There are a variety of different surgical techniques that can be used to treat VPI, and the choice of technique will depend on the individual patient's needs.

This book provides a comprehensive overview of the surgical management of VPI in children. The book covers all aspects of VPI surgery, from

preoperative evaluation and planning to postoperative care and follow-up. The book is written by a team of leading experts in the field of VPI surgery, and it is illustrated with numerous high-quality images.

Table of Contents

- Chapter 1: Preoperative Evaluation and Planning
- Chapter 2: Surgical Techniques
- Chapter 3: Postoperative Care and Follow-up
- Chapter 4: Complications of VPI Surgery
- Chapter 5: Outcomes of VPI Surgery

Audience

This book is intended for otolaryngologists, speech-language pathologists, and other healthcare professionals who are involved in the care of children with VPI. The book is also a valuable resource for parents of children with VPI.

Reviews

"This book is a comprehensive and up-to-date guide to the surgical management of VPI in children. The book is well-written and illustrated, and it is a valuable resource for otolaryngologists, speech-language pathologists, and other healthcare professionals who are involved in the care of children with VPI."

- John Doe, MD, FACS, Professor of Otolaryngology, University of California, San Francisco

"This book is a must-read for anyone who is involved in the care of children with VPI. The book provides a comprehensive overview of the surgical management of VPI, and it is written by a team of leading experts in the field."

- Jane Doe, MS, CCC-SLP, Speech-Language Pathologist, Children's Hospital of Philadelphia
